

VIRTUAL PANEL DISCUSSION SERIES

Integrating Anti-Corruption with Climate Action Plans: Fostering and Realigning International Negotiations and Initiatives

The intricate linkages between corruption and climate change need be clearly understood and discussed at national and international levels. Both threaten human life. It has been empirically established that corruption fuels climate change. As a corollary, climate action plans cannot succeed without fighting corruption. The UN sustainable development goals demand urgent actions to combat climate change and corruption in various forms. The current virtual panel discussion will address the major issues of corruption and climate change, including some of the key aspects of COP26 on this front. It will focus on the crucial role of diplomacy and international negotiations in achieving the SDGs on climate change and in hardwiring anti-corruption measures into climate actions and policies.
