# HARDWIRING ANTI-CORRUPTION MEASURES INTO CLIMATE ACTION PLANS: NEED FOR REALIGNING INTERNATIONAL INITIATIVES AND BUILDING ANTI-CORRUPTION CAPACITIES

## OVERVIEW

Climate change is an unfortunate and deadly reality. World leaders are striving to take measures that involve huge investments in alternative energy and using sustainable materials to reduce the devastating impact of climate change and facilitate the implementation of the UN 2030 Agenda. However, the attainment of Sustainable Development Goals (SDGs), particularly those relating to climate action, will be fruitless if corruption remains rampant by siphoning away much-needed resources from this crucial fight for our survival. This panel will address the major issues of corruption and climate change, such as the need to mitigate the vulnerability and threat of corruption in carbon trading.
